Water-to-water heat pumps

Please note in general:

- For some systems, the minimum software versions listed above are required (if unclear, please contact customer service).
- Heat generator cascades are not compatible.
- A solar thermal system negatively affects the functioning of EM Trend (reliable demand forecasts cannot be carried out).
- Systems with a second heat generator (hybrid module) are not supported by EM Trend.
- EM Trend cannot be combined with KNX, SG Ready or Easytron.
- Using the MyStiebel app is not possible with EM Trend.
- The Modbus interface may only be used for reading purposes

Additional Air-to-Water Heat Pumps from Release Version 1.0.1.0 (July 2024)

WPL-A 10 HK 400 Premium – WPM System

WPL-A 13 HK 400 Premium – WPM System

EM Trend Compatibility for ISG Web / ISG Plus / ISG Connect

To ensure EM Trend compatibility for ISG Web and ISG Plus, the EM Trend software extension is additionally required.

For ISG Connect, the EM Trend software extension will be available by the end of 2024.

Alternatively, ISG Web / ISG Plus should be used.
